# California Agriculture Drought Fact Sheet April 2015

# **Water Supply**

In California, 50 percent of the water is used to protect the environment. About 40 percent goes to farms and the other 10 percent goes to urban areas. *California Water Plan Update, 2013* 

Crop production per acre-foot of water has risen 43 percent in California between 1967 and 2010.

<u>USDA National Agricultural Statistics Service, California Department of Water</u> <u>Resources</u>

On average, agricultural water supplies from Redding to Bakersfield have been cut by 70 percent.

Over 2.8 million acres, or about 30 percent of California's irrigated farmland, will be receiving zero surface water supplies in 2015.

Over half of California's irrigated farmland is receiving 20 percent or less of its normal surface water supply.

<u>California Farm Water Coalition Agricultural Water Supplier 2015 Survey</u>

### **Economy**

California Agriculture represents 15% of the average U.S. state economy (\$308.3 billion).

California Agriculture is larger than the economy of 4 states (South Dakota, Montana, Wyoming, and Vermont).

<u>US Department of Commerce, CDFA</u>

California agriculture grows more than 50% of America's fresh fruits, nuts and vegetables across 78,000 farms, 400 crops and 450,000 jobs. <u>CDFA, Giannini Foundation of Agricultural Economics – University of California, USDA</u>

California is the country's largest agricultural producer and exporter.

Agricultural products were one of California's top 5 exports in 2013, totaling \$13.7 billion in exports, a \$1.8 billion (15%) increase from the previous year.

California's value of agricultural output was \$46.7 billion in 2013, with total U.S. output valued at \$269.1 billion.

California accounted for 15% of national cash receipts for crops in 2012 and 7.1% of the U.S. revenue for livestock and livestock products.

# Assembly Committee on Jobs, Economic Development, and the Economy

Almond production generates 104,000 jobs and \$21 billion in revenue for California.

Almost two off-farm jobs are created for every one on-farm job in the almond industry.

UC Davis Agricultural Issues Center

### Crops

Forty six percent of the citrus in California depends on surface water delivered by the federal Central Valley Project.

California Citrus Mutual

Almonds account for about 10 percent of California's irrigated acreage and use roughly 8 percent of the state's agricultural water supply. *California Almond Board* 

Advanced production practices over the past 20 years have helped almond growers improve their water efficiency by 33% for every pound of almonds grown today.

USDA California supplies 85% of the nation's fresh citrus. *USDA*
